

Niklas Benediktbeuern- April 29, 2026

Speaker So yes, we come prepared with some questions. Uh, and, uh, we wanted to learn more about what you guys do here actually. So like, what's, what's the, all the tasks that, uh, your team manages so that we would learn more on the process and where we can help out. Yeah, maybe. Um, we have to start. Like you, you can do like a walkthrough of your day. Like what? What's, what did you do? Uh, what do you do most of the days when you come to work? Yeah, but maybe you're not focusing on my work, but on the stuff where we want to establish, um, some new structures and systems. So normally they come to work, they start the computer And then they're checking their emails and, um, get the phone ready. Uh, because there's a mobile box on after they leave. No. People know that they're not anymore in the office. Um, so they know what is a regular office time and maybe there are some messages on the mailbox and probably a lot of emails in the inbox. Mhm. And then they have to process them. And in the mailbox there can be, um, like new requests or there can be a group which wants to have some changes, for example, because now they're not coming with fifty people, only with twenty people or they asked, uh, we, we booked for fifty people. Can we come with seventy people? Or there's a request from a teacher from a school. We would like to come in the year twenty twenty seven before Easter versus five school classes. Do you have space? And then they have to process this request to see in the system if there space. If there's not space and where to where these people could stay actually. So all here, these rooms, the windows, you can see most of them are rooms where people can sleep. And here we have the, the shower and the toilet in the rooms. And the other building I'm going to show you later. We have them on the floor. It's a bit, uh, different standard. It's a youth hostel. So you have bunk beds and so on. And, um. Yeah, in these rooms in this room, you have single bedrooms, like each on ground level, like, and you have between we have single bedrooms for the teachers, for example, or people accompanying the young people because they can't sleep with young people in the room. Um, and then between two and four bedrooms. So standard is three beds, but in some rooms in the first floor we have like one bed hiding under one other bed so we can pull it out in case we need the four bedroom. Yeah. Okay. But this you have to keep in mind if you have the booking and you if you have a request for a booking, you also should know, okay, how many other school classes are there? Mhm. Um, especially in the other building where I have, um, shared bathrooms and toilets on the floor, I really have to pay attention towards genders and so on. So we try to divide them by floors. Is there somebody with LGBTQ plus background? Normally they get a single bedroom because with minors it's really difficult to get permission from all parents. Actually, you need them. You just can't put them in a room with other ones, because you would need the permission of all the other parents and so on. So, um, normally they then get a single bedroom because it's more easy for them, it's more easy for the school and so on. It's, it's really challenging, but that's a nice life hack for the kids though. Yeah. Just one, a single bedroom. Just say you're gay. Yeah. Yeah. Maybe not gay. Maybe it's better. Transgender? Maybe. Yeah. That's a real challenge. Let's say it like this. But normally you have two or three requests in a year for this. And with a request for staying here. It's also the question, what kind of program do they want to have? Like these groups here they are coming from different parishes. So their church related. Um and they are now here without any trainer from our side. So they run the program on their own.

Oh, okay. And we are only involved, like we have some volunteers there who do the reception and so on, but that's something happening in the background. That's no problem. But so we know they are here. We don't need stuff from our side that's easier for us. And for example, the external like stuff. Do you also give them a room here or. Yeah. If they come also as well. Sometimes they have a drinks a week for example. And then after you can process the booking request, it will be in our system in the house manager. And there you put also the numbers for food, like what is the first meal? So we have breakfast, then you can have lunch here or you get, uh, you make your lunch package at breakfast, for example, if you go for hiking, you make your sandwiches at breakfast and then you take it. Then we have a coffee option, a coffee break in the afternoon, and then for sure, dinner is there. And then you have to process like allergy or special requests for food and so on. But this you can you have to get from the customer and put it to the system. Okay. Yeah. The numbers. So we should. So everything is in the system. Allergies room structure. Yeah. Currently in three different systems. We are currently establishing one. That's the house managers link I sent you and that's in the system. But to put there the information from the request via email or phone, that's the biggest challenge actually, that you have to look there. And if the system actually would know, oh, we have we have three, we have space. It's easy to put it in. Currently it's processed manually by by hand, but actually all data is available to know if it's possible or not. And what is happening with the three systems. Like what, what do you exactly mean? You say you're like moving to the single system doesn't mean that you just like take everything that is written in every single system and put it into the other one or what's happening. That's one long process. And, um, so from history, um, we had three different actually four different institutions here on the campus Yeah. Now, let's say from three institutions we have put together two. One. Mhm. All three institutions houses or let's say houses. They were using the same software house manager. Yeah. But in different ways. So it's the same software, but you it's very individualized how you can use it. So we had three different systems here. Okay. Same software but used differently. So the data in the background, like the resources and so on the prices, they are all differently put in. Okay. Okay. And it's not possible by computer, the software company to put all three easily together. So we had to say, okay, we will build one complete new one. Okay. And then we have, you have, uh, like people just working on like, like programmers. Yes. Yeah. That's a, that's a software because. Okay. Uh, do they work here or do they work? No, they work somewhere else. So that's like computer alien. That's a professional company providing the house manager in the background, because it could be potentially interesting for us to talk to the guys who are working on your system, if it's possible. Yeah, we can establish contact. Yeah. Because I'm like, is it possible to, uh, speak to the staff members today? Maybe Saturday. Saturday is always difficult. But for this, maybe we could do during the week an online meeting. Okay. Mhm. Yeah. That's more easy to make Saturday. Normally we have really like I said, we are really focusing on the school time. So Monday to Friday. Okay. It's the main working times because most of the requests are coming from schools. Mhm. So we work normally at the same time. Like schools are working on the weekends. They're not working. And holidays are also difficult. Uh, but you do have access to the system and all this, uh, this thing. Maybe you could just, like, show us on the, on the laptop. Like what? What you do to the office and said, yes, this we can do. Yeah. So so that we would like, know a bit more how it works internally. Okay. Um, we wanted to learn actually about, um, uh, where the coworkers

see that they, um, want things different. Maybe you've asked, uh, around a bit or. Yeah. Uh, or we can also postpone it to the, to the Zoom meeting, but we were like interested, like what, what do the guys that work here actually say that they want? Mhm. That's, that's very important to actually see what, what they require and then yeah, cater to their needs. Yeah. It's, uh, both sides. They will be afraid that will take away their job. Yes. That as well. So, so that it would make sense to maybe talk to them. A small fear maybe, but um, at the same time, they see also that it's a lot of workload. Yeah. And we can reduce it because there are things which you can easily put to. Yeah. Yeah. You don't have to do by hand. What does Don Bosco actually want to achieve by by doing this. Like what are what are the what are the needs? Do we are we trying to reduce the costs or do we, are we trying to make the employees happy? What's. What's the purpose of reducing costs? Everybody likes to hear. Yeah. So if you can handle the same workload with the current staff, they can also capacity for the work. So at the end, if you have more capacity to, to work with the young people here, that's a gain for everybody. Or if you have more time to be in contact and with our customers or to develop new program ideas with our customers, um, that would help. Okay. Yeah. And this is something that AI not necessarily can do, but instead they, they, they have more time to do that like other stuff. Yes. And really for the personal contact with the customers and also to see maybe also to do evaluation of our seminars and so on on a very personal level. Currently we have evaluation of our programs. We have it on paper. We don't have a system for this one. Like it's like, um, all, all trainers equally trained or are they like, oh, that's very different. That's also very different. So we have like interns who are studying here. So they are quite new. We have trainers who still study but have a lot of experience. I would say even some freelancer trainers that have more experience than some of our, um, um, um, regular staff or full time. Yeah, yeah. We have full time employees and part time. I asked because you said like, they have like multiple activities or topics they talk to like different schools. Yeah. Are there like specific trainees that. Yes. Let's also talk about certain topics that are. Yeah, yeah, yeah, yeah. So we have like here we have, for example, the orientation days, retreat days. And not everybody can do them at the same time. We have a project called, uh, Umwelt mainly focusing on environment. Other staff are doing this one. We also have a hut up in the mountains and one there next to the river, and one near to the lake there. And for this, you also need a special training to accompany a group for this. So that's also something to keep in mind. At the same time, we can run like four orientation days for classes between um. Twenty five to thirty pupils because the seminar rooms are also limited at a certain moment. So we have larger ones and smaller ones. So I can't take six groups with a size of thirty because I don't have the room capacity. Sleeping wise, I would have it, but seminar room wise I don't have it. Mhm. Okay. Interesting. And as soon as the system reaches a request, like, okay, we already have five orientation days. There's one with a smaller group, we could handle it. Seminar room wise, but then we really have to close a look into if you have enough stuff in this week. Mhm. Okay. How do you handle like, sickness when one staff member is like, can't do the topic or a lot of faith, like last week was quite horrible since people got sick. Pray that they get better. Six people in total from volunteers to staff got sick. But how do you like, manage? Like, do you like reschedule the orientation or you can reschedule like on, on Monday morning, I didn't know who will run the course for the school, which arrived at one o'clock. Mhm. Yeah. At twelve thirty, I had a plan and I had somebody for this group as well. And when the group arrived on Wednesday, three

groups arrived and Tuesday evening for two groups. I didn't have a trainer. Um, on Tuesday, Wednesday morning I had one more. So one was missing and I only had a lunchtime. So for this we use a network that's only. And sometimes I have to say the schools. Um, sorry, I don't have somebody. But that's only in very, very rare cases. Okay. Normally you find a lot of we find some solutions. Mhm. Okay. How many people do you have in the week? Staff wise or young? People like classrooms, uh, classes. So between in this building, we have Monday till Wednesday three to four and Wednesday till Friday again, three to four. That's a regular shift like here. Normally most of the programs are three days next week. But for example we have also an international group. So we have from Monday to Wednesday, two school classes from Wednesday to Friday, one school class for orientation, then day, and then something called social competence training, social competence training. Um, and at the same time, from Monday to Friday, international seminar for European volunteers. Okay. Okay. And how do you manage like changes when I don't know when some teacher wants to like reschedule the. No, they are booked normally. The teachers are not rescheduling. Um, it's really they, they have to do a high effort to come here because they need at least two teachers, maybe a female to accompany the group. Mhm. And normally it has a huge because this teachers are then missing at the school itself. Normally they also have other classes to teach. No. So they have to compensate. So from teachers side, rarely there are changes. Okay. Normally only there's a change in numbers by the students coming in. So that's actually what I wanted to ask how how do you guys manage that? Because like, I mean, it's basically like if they book like two years ahead, like. Mhm. Even they don't have like, any idea what, what number of students will come. So you can maybe like, just guess, okay, one class, two classes, but then how do you assign the rooms? How do you like, uh, for them? Do you just like take the maximum number that will be possible and just assign it to take the average number? So normally you put there twenty five or thirty depending on the school. Yeah. So some school classes, we know they normally have thirty. So we put thirty. Then there are some schools which have lower numbers. So we put a bit less. So we calculate twenty five then. Mhm. But that means towards the beginning of the year school year we normally try to get accurate numbers or in the time before, like two or three months before we try to get more accurate numbers. How what's your like deadline for for getting the accurate numbers? Like when when you say, okay, uh, the, uh, by then the school has to give us a like, uh, one certain number. Otherwise, like, um, the final contract is currently sent out two weeks before. Okay. But that's actually a bit late. So we're trying to establish a bit earlier. Yeah. And they, you only have to see, keep in mind school holidays where teachers are not working. And so the staff in the secretariat and schools is not working. So the biggest challenge then would be September, October, where you have to find a good way to get the numbers because for the long summer holidays, if they really know the numbers, but at least they know better than before. Mhm. Um, but if you know the numbers before, like one month, that would be ideal. Okay. Okay. And you do that manually? Yes, we see you. Check. And this these are the the classes that are coming up. And you. Yes, yes. And then we reach out to them. Yes. It can be automatized and easily to see if you have all the information. But it's not only always one email, it's like we write them, please send us information. Then they send half of the information. Then you write again. Thank you for the first half of the information. Please send me the second half as well. You forgot the following points. Yeah, and this is how we imagine it would work actually on on both sides that you guys

have. Like they send a request and they wait maybe like, I don't know, what's your response time? If you say that you have like hundreds of emails or something. Yeah. How long will it take until an email is answered? Then you answer. They don't have that. They didn't provide the following information. And then, uh, they, they, you wait for their answer, then they wait for yours and it goes in a, in, in a circle like this. And you always and our. My colleagues are working. They always have to think again for this booking. So they can't follow one process because always the other bookings are coming in again and then you have to. Ah, that was two weeks ago. We had this thing and you have to check it up and so on. No. Mhm. Yeah. So because you actually you have to go back and like, see the whole like email. Uh, yes. So it can be confusing. And it's also a lot of mistakes can happen. Yes. Because it's not like you can finish one process with one customer doing the booking because it's stretched over such a long time. Yeah. MM. Okay. Interesting. Do you have like a plan or like room plan where, you know, like these rooms are reserved? Those are free. Yes. This this does exist. Does it, does it also hook with the seminar thing that you told us? Because because, uh, and the coworker thing. Because because you said like there was the rooms. Sure. but you can. You have more rooms than you have place in seminar rooms, meaning that you can like, overbook and then people just don't fit in the into the seminar room. So you so we, we have to take that into account, right? Like both, both sides. Yes, yes. The seminar part and the, uh, the room part and the room part. Yes. And the program part and the program. So in the, in the youth hostel, for example, then if they say, okay, we want to come and we only want to sleep there and during daytime we want to go out to Munich, go for hiking and so on. And we still have twenty three beds. Why not come? The best thing for us is if the house is full because empty rooms are not generating income. Yeah, and if my staff is already busy with other programs, but I have a request from a group who is running the program on its own. No problem. They can come because they don't use the capacities of inside and so on. They only use the sleeping rooms. They are free. They can have it okay, meals we can provide and during daytime they are out somewhere, so they don't need a seminar room. They don't need a staff from us. Great. Okay. Nice. And, uh, talking about the the phone calls. Mhm. I know you wanted to, like, the human part is still in it, but in outside of working hours, would you like, like it still be available or or not? I mean, yeah, is there, is there like a limitation on the use of AI? Like, do you, do you want to like put a phone AI agent that will answer all the calls? Or do you like, do you say, okay, during the working hours, people answer and after working hours, I, I assume that we still need this personal contacts, but maybe if some, if AI could listen and transform the information already into the system. Yeah. That was, uh, we were thinking about like, uh, transcribing the phone calls and putting it into the actual forum that it's on the website already. Yes, something like that. Yeah, maybe not on the website, but directly into the system. Yeah. Or directly to the system would be more helpful, I think. Yeah. Transcribing it and in, in the system, taking the, like the, uh, important information that you guys need, like highlighting it and you just, yeah, we were showing an example that they use in, uh. Yeah. Uh, that, uh, that they just have this like this, um, the phone call. Somebody is on the phone, uh, on the left. You have the transcription being done in real time and the analyzing and it looks. Yeah. And suggests. Okay. Uh, name, address, uh, case, whatever already. Yeah. And they also suggesting already what kind of vehicles you could send. So it's making proposals. Yes. Yeah. So we could imagine maybe something like that, that the, uh, I, I, I could be like transcribing a

phone call and like a human has still has to like check and prove that the information is like, right. Yes. Like take jobs or. Yeah, yeah. And I think for us as organizations, it's important to have still this personal contact. I think our customers would be very distracted if an AI agent is answering the phone call. Yeah, yeah. Maybe not in the office times. That could be an option. Everybody understands this. And then we can process already the mailbox, then the stuff that has to go next to the office and listen to the mailbox, but can see, ah, this request is there. But during office times, it would be really useful for us as an organization or no, we needed this personal contact. Yeah. Um, we were talking about how you, um, you mentioned last time that there was this problem. Somebody calls on the phone and then says, hey, uh, I, uh. And then they speak on the phone and then you get an email. Hey, we spoke on the phone and you have no idea who spoke to on the phone, to who and all of that stuff. Um, do you guys have like right now? Is there any way to like to find out maybe like if somebody spoke on the phone, whether they like created already a whatever, like started filling out the form and stuff like this? Yeah. Currently not because in the office we had so many changes. So we have now four to five stars, which are a new team. Two of them are completely new. Two other ones have left us. So the team is completely new. Um, currently seeing who is doing what kind of work. And after we still have the three different systems, they always have to check in the system if there's already something inside. They have all access to all three of them or like in. Yeah, all three of them. That's tough. So mainly they. Yeah. No it's. Yeah. No it's free. Yeah. So we, we, we try to divert diverted a bit. At least that's two work with two house managers, let's say house manager, one, house manager two and two others. I work mainly with House manager number three, but it's really I can show you later. So you have three icons on the desktop and. Yeah man. Okay. In one house is in one system, the other house is in the other system and the other ones are in the other system. Yeah. And you have when, when a call comes in, you basically you can choose a room in any of the three houses. Or is it like how, how, how was the what, what, what are the criteria? Why do you choose one house over another? Um, it depends on the program, what they want to do. Okay. And currently in future it will change probably. But now we have so different standards. And normally here we have this retreat, this international seminars and the groups on the weekend. And the youth hostel mainly has like um, if they come really school classes for school on time. So they go out to the lake or to Munich and so on. And then we also have a place with tents with school classes can come. So we also have a tent place. It's only for one school class that's quite easy. So you know that I can show you later that you have templates. You can book it only during summer time. It's it's really nice. I'll show you later. Um, but, and because of the different standards, we are now not putting groups which are currently in the youth hostel through here. So we mainly they stay there. So the system also should know this group is already coming since fifteen years to this house. They will stay there for the next fifteen years, probably till we do some renovation work. Okay. You mentioned that the system is, uh, maybe gonna change. Uh, maybe we, would be important for us to know. But not. Not now. It will take some years. Okay. So like when when our project was presented to you, it was still took. Yeah. And now we actually the Don Bosco close to Bendigo. So yeah, since the first of January, everything has changed. So we are very much in the process of putting things together. Okay, then we're at a good point. Where where you guys. Very good point. Yeah. So going through the metamorphosis. Yeah. On the way, you're losing some staff members. It's natural. There's a main challenge that we still have our

staff our pedagogical staff. Um, yeah, we have three different places where they have their offices because some renovation work is still going on. So we are very our team currently is very diverted, but the Secretariat where all the customers are applying for or the bookings are coming in, they're in one place. Okay. Well at least. Yeah. Well at least. Yeah. Okay, so back to the question. We don't have like this, um, way to manage this. Now, like our idea was we want to move closer to the unified system, meaning that like a transcription is made. So, um, and the, the three systems, as you mentioned, they work for separate houses right now. You okay? Do you have like, do you have like an idea? When are they gonna be conjoined? Like, how is how do you want to like centralized or no, probably in May it will be centralized. Okay. But now I will add one more point, which is really confusing. Yeah. Um, um, so the first big inner yard after we were crossing the railway track where I said, there's a hotel, the hotel rooms are managed through the same system, but we don't want to enter there because they. In this one house manager unit, which we will have probably. From May onwards, we have the use educational part inside and there will be also one tab, maybe where all the rooms are inside from the hotel part. Aha. I'm not sure how much is influencing our part. I hope not, because I really want to see. It's different because the hotel is really. They are connected to booking dot com and it's really confusing. Yes, it's totally different, but we have to use probably one system, one house manager for the whole institution here. Yeah, just that you have heard it. Okay. We have heard it. Yeah, yeah. I have one more question. Yes. How do you like schedule employees? Do you say like you do this work or you do this program or you manage this class? Yeah. Do you have like a system or just like. Yeah, yeah, yeah. So sometimes you have requests from schools, hey, we want person X, Y, z. Then we know, hey, this person because they have good experience with this person and so on. So now we try to arrange it as well. And then we know the staff can do following courses and they get the list. Um, for example, before Easter, they got a list from now till the beginning of June where they can see it's a word document where you can see all the groups coming. Mhm. And then they put in their name. And then we still have some, some gaps. Then we ask again, please see what is possible. And then we send it also out to our freelancer. So we do it at the same time. But normally the um employed staff, they can choose before and then we send it out to our freelancers. Okay. Okay. Um, do you. Coming back to the staff questions. Do you have, um, at least like two people per topic? Like, uh, meaning for example, you do a politics course. Do you have like, uh, enough people to actually like, if somebody is sick for this so that everybody could be replaceable, so to say not everybody can be replaceable because for some things, some, for example, is there a special tour on the river? Okay, then we know we have one or two staff who can do it. Mhm. Mhm. Um. Like floss. What is floss? So you build your own ship with, um, normally out of wood and then you, um, we travel on the river. Yeah. But you build the boat on your own. Oh, you know it from Western movies, maybe. Yeah. Like building a raft? Yeah. Raft some, I don't know, the English. I don't know the English word. Yeah. Um, but all the other things like the orientation days here lasting from Monday to Wednesday and Wednesday to Friday, people doing this, they should do their classes. They can choose after they have arrived here. We do voting and they can choose from nine different topics. And everybody should be capable of all nine topics. Oh, this is tough. That's okay. It's non-formal education. So actually it's okay. In non-formal education, you have a few methods and you can use them for any topic actually. But you should be. Yeah. Like one topic is um, about death. Yes. For this,

you should be a bit trained like because you have crying people then in front of you and there was a suicide at the school. We only send in stuff which has real experience because those are very unique cases that can also come in, like through email and teachers writing us. Please keep in mind, two weeks ago, one of our students passed away because she was jumping out of the window. Yeah. Okay. And then we then we also, as team, we have to sit together and see what can we do? Uh, what can we offer? And is three days enough? Yeah. How to prepare? Yes. How to prepare and also to make clear what we can do and what we can't do. Mhm. Topics are chosen by the school or by. By the students. By the students here. Before, it was always they could do it in advance. So we have sent out the list before and then they will do the voting in the school. But sometimes they did it two months in advance, three months in advance. They already forgot what they were voting on. Sometimes teachers were voting for their students. And so we decided, no, they do the voting here. Okay. Yeah. Makes sense. Yeah. So so that means our stuff has to be more spontaneous. Yeah. But we have a handbook where all methods are inside and so on. Okay. Okay. Yeah. Mhm. Mhm. So with, uh. Let me see. I had more questions. Sure. And. Like, do you write them an email, like three or two months before they come? So they send all the important information? Yes. They get a reminder. And we send out a contract like where they have to bring us information, which we need. Mhm. Yeah. Sometimes you get it in in that time what you want sometimes the week before we don't have an answer. Mhm. Yeah. So we need an AI and agent spamming the customer. You didn't reply. You didn't reply. You didn't reply. So can you please send us the less information, please. Yeah, yeah. Um, but I imagine, like, um, just, uh, do you mind how tell me how you picture it. Uh, does the agent just overtake the, the whole booking process or do you still want like a human to approve on, on it or like start with human approving? And then like, if it's, I think we have to start with human improving and because it's really complex. Yeah, yeah, it's really, really, really complex. And, um, also now we try to bring all the information knowledge to the new generation of staff. And actually you have to work here for one year to see the whole cycle because then you have to experience, you have experience actually all eventual cases of groups coming here. Okay. At the end, if you want to bring it down, we might have around Sixty different programs in total. So that's also a big we try to simplify everything, but currently it's still very huge. Yeah. Yeah. How many programs do you like do on a week? Approximately between. So between six and nine orientation days. Then maybe we have another organization here doing two orientation days next to it, two environmental weeks, maybe two. So one, two three, four. Then we have daily courses with school classes, but they are regularly six seven per week, maybe ten different, sometimes fifteen. Okay. Okay. Okay. Coming back to the mental health and allergies, um, you meant this is like sensitive information. Yes. Um. Thus, only one employee know all the information or has everyone like access to that information. Then later, normally everybody has access to the information. Mhm. But if it's really about the mental health situation of one individual, um student. Mhm. Mhm. We make sure that only the people who are there during the week know it. On the other hand, in each class, you have young people who are facing mental health challenges. Mhm. But if they are more serious, um, and we have the clear name, normally only the direct involved staff knows it. And yes. Uh. Yeah. And I know it. And my colleague who are responsible because at the end we are responsible. My colleague and me. Um, okay, that's good to know. If something goes wrong. And then on the other list, I can show you the list. There's down written. Um, how

many people have like, uh, gluten allergy and so on. Mhm. It's only written by numbers, so it's not written by name there. So that's, that's already helpful. Um, but sometimes teachers write them. Okay, we have, uh, student x, y, z has energy, blah, blah, blah, blah, blah. Student z, y z has z. Then suddenly we have really sensitive information. Normally we only need the number. So tell us how many people in your school have a gluten allergy or vegetarians and so on. And then if you only have the numbers, it's quite easy. But sometimes teachers send with clear names and then we have a problem. Oh how come? Is it a problem? I mean, it's just doesn't doesn't seem so sensitive to me. It's um health data. So it's the one of highest data you actually have. Now if it's medical health data, it's one of the highest categories. Okay. European data protection regulation. Datenschutz. Yeah. It's in the system. Or do you I have it written on the paper? No, that's all that's in the system. It's also in the system. It's written. And when you were like putting it down to like, does it does it like say it in a note to a room booking or does it like where, where is it stored? Yeah, it's, there's a note I can show you on this. Maybe you see it and then okay, is it like, is there like a disclaimer only this employee can watch like this information. So if you print something in the form, it's not personal related. If there's something before, normally this stuff will come to me or my colleague. Um, and then we will check the information and talk to the trainers during this week what to do and how to deal with it. Yeah. Okay. Because like I'm, I'm thinking about it right now. And if we need like an, a confirmation on like every sort of, so to speak, every. Booking. Mhm. Maybe we could use an AI to just, like, actually get the information out of the client, put it down preliminary. Then an employee just comes, looks over it. Um, if, uh, whether it's everything. Correct. The AI just gives like an overview. Okay. We talked, uh, and like Rich this and this and maybe like sensitive information, like somehow flagged. I don't know whether I know, um, if it's possible to like, actually, like, I know somehow like hide sensitive information that's that, that we would need to like, um, think more on, I think. Mhm. Uh, the mentioned is it's a few cases in the year, but if the case is there and it gets public, we, we have a problem. Yeah. Yeah, sure. That's a main challenge. Makes sense. Data protection sometimes is really good. Sometimes a really big headache. I feel it. Do you, like prepare one week before the class comes or. Yeah. Normally. Yes. So on Thursday normally we have a meeting of, say, all house related housekeeping stuff. So the leader of our housekeeping is there, um from the Secretariat Secretariat who's doing the bookings. Uh, two people are there because there are two systems, the one responsible for our volunteers. Of course, it's also important to know. And then on Thursday, normally we do the detailed planning of the next week. We already know, okay, groups will come or people have holidays, but we do the detailed planning to see okay, does is there a mistake inside? What's about the planning of the um meals room? Do we have to shift timings or whatever. So there we do detailed booking, uh, detailed planning, but all the information should be there already in advance. Okay, so the staff who's doing the trainings and so on or the courses they already know before. It's really the detailed planning of the groups arriving. Do we have to put bed sheets? What do we have to keep in mind or yeah, what do you have like the information for the upcoming shoot on time or stagger like when they schedule like for twenty twenty seven or twenty twenty eight? What do you have all that information? Where do you store it? Is it that this information is in the house manager? So there's a there's a booking. And then for sure, like weeks before we have to do detailed planning. Okay. In which day do they want to go to Munich. So we have to ride the bus

company to book the bus for them. We have to put groups maybe together and so on. This we can't do two years in advance. It's not working. Yeah. Um. Yeah. Okay. But this might be also something that I. Agencies. Okay. There's a group coming for him and they want to visit Munich and another place. So you have to inform the staff. Hey, write an email to the bus company for the booking reminder. Yeah, like this could be also there. This also should be kept in mind. Okay. Yeah. There's not much potential there. Yeah. And then sometimes also you see okay, two groups are going to Munich, so it's better. The two classes are sharing one bus. Mhm. Yeah. Mhm. Okay, great. Interesting. Yeah. Do you have more questions? Do I have more questions? Um. What about the rooms? maybe. Have you had. I mean, I guess you have, uh, any cases? For example, if the class is too big for one room, but you got like three kids left. They don't have like. No, no. Normally manage this. Yeah. And the same room, like separately. Uh, the girls and boys. Yeah. Normally this works out. Yeah. Because of the detailed planning before. Okay. We only have a challenge if the teacher is bringing five more students without announcing. What do you do in that case? We try to be creative. It's really like you sit there, you have the lists and then a lot of knowledge about past experience. So we have some people working here for ten fifteen years. So it's good to have in mind what what possibilities you have here to think about. So sometimes then we say, okay, we take the room and we put two extra mattresses inside. Okay, that could be like one last option. Then you know where. Then you have to know where you get the mattresses from and so on. And then you cover the mattress and so on. But that could be one option, for example. Yeah. Okay. Makes sense. There are sometimes there are options, but you really you learn to be creative here and very resilient. No, you have to be very resilient to work here. That's a cool part of the job. Yeah, actually it is. That's I like most. Yeah. I actually wanted to ask, um, like, what did I want to ask just now? Um, when, uh, you told us that there was like this, that you needed to work a whole year here to actually know what things can even happen. Do you in any way have them customized or like, I don't know, like, or like a binder where there's like what to do in case. Uh, I don't know. Suicidal thoughts, kids. Uh, then what to do if too many people came and stuff like this? Okay, we know who in our organization has the mindset and the knowledge. Yeah. And these people will be contacted. Yeah, yeah. It's like they are the, the living binders of. Yes. Correct. We try happens if they're sick or not there or unreachable or it's always one person's reachable. Okay. Okay. So far, but yeah, they have to be, they, they just don't have the right not to. It is, it's a commitment from the people. Yeah. So one of them is a Salesian. So he belongs to, uh, to Don Bosco. So he's a priest. He lives in the house. Sometimes he's three days gone because he has some holidays. Normally he's working two weeks in a row. So he is here normally all the time. Um, then I'm reachable twenty four over seven actually on my phone and we have one or two more people. It's really through commitment of the people, but we are working on putting it down. Yeah. So we, we, we have, we have emergency plan. What we know if somebody is jumping here out of the window, for example, this plan we have written down. Yeah. Um, but for the other cases we slowly trying to establish it. That means that me, I'm putting it to AI and trying to collect everything and make a system out of it. It's quite easy then. Yeah. But we are not there now to have one book for it. Okay. Yeah, that's also okay, but it's just, uh, cool to know that there is like there, the, the, there is like I, how, how it works and, and yeah, yeah. Um, yeah. So I, our idea at this point would be to actually try and like the, the main focus that, that we know and that we noticed is that, um, so what you told us basically

information loss, phone email thing, repeating tasks and manually, uh, and, um, we just imagine that with, like with the whole system of booking, the users may also not be like, what do you do? You guys get feedback on how the booking process is from, from the clients? Are they fine with it or is there like normally they are fine with it. Sometimes their complaints that we are not answering in time. At the same time, they're not answering in time. It's like it is. So if you have three sick people at the same time, okay, you have to wait for your email. Come on. Yeah, yeah, yeah. So so this is what we thought, um, actually regarding the formula in your, um, website, um, you said that people don't generally use it. You said it's quite new. Okay, so it's a completely new website. Uh, We are going to change the website in a few months. Again? Yeah. It's like you call it interims website. So it's only for the time being for the combined system we have here of the different organizations. But our essential organization has changed the website. So if you go to Don Bosco D, you see already the new design and you transform already our website to the new design. But we needed one website for the new organization here and there. We have now and there we said instead of the email address on the website, we want to have the forms there to have one way to channel the request already and not to have a random email, but really to see what. Yeah, yeah. Okay. I mean, the, the forms don't work better for you. So it's like, because you just get already systemized info. You don't have to ask that much. Hopefully still people, there will be people who are not filling it in wrong. Yeah, wrong. And we also have customers, uh, since twenty years. So they won't go on the website. They will because they are used to just make reply in their outlook or whatever they use. I mean, going here for twenty years, they hopefully would already send you like every in every info that you need. No, but they don't. Some. Yes. And some are really. Yeah. They also have a lot of to do and they forget things or. Also in the school, sometimes somebody is sick and then they don't get the information. It's the same like. Yeah. Um, so we pinpointed some of the goals we think we like, like what are like main, like what, why do we do this whole thing with the new system? So it would potentially, uh, maybe even increase the amount of revenue you generate because you get a system that is faster. You get to like um, capacity. You have, you have more capacity for the employee. Employees, meaning you can like get more people in here potentially. Correct. So and at the end, we can more in advance see what we have to expect. So we could do more accurate planning. Mhm. And at the end with the aim to have more time for the young people coming here. That's the main thing why we are doing it actually. Okay. Yeah. Because to have more time for the young people. Yes. Yeah. And if you could do more long term planning, it would really help to see also what resources we might need. Or then is the agency says, hey, in August twenty twenty seven, you have to see already it's not working or you have to pay attention. Mhm. Because we are so huge, sometimes this can get lost if only human beings. Yes. Looking on it. Yeah. Um, this is like. Okay. Yeah. Uh, then we decrease height. Uh, one of the goals is to decrease the boring workload for the, for the colleagues because they get boring and annoying, boring, annoying, and actually like, um, it's very simple, but very complex at the same point. It's like, it's, it's the, the job itself is easy, but you have to keep a lot of things in mind. And this is like easy, more easier done by. Yeah, it's a huge mental load. Yeah. Yes. So and we want to um, increase the efficiency of the process basically. Okay. Um, ah, like we did something like use cases like what we want to do and like our two main things is to automate and to systemically, this is like systemically is the part you already are doing by putting all the three systems into one thing.

And we want to actually, like, see whether we can get like your, for example, the problem with the calls and emails that there's like a ticket created and you can always just find the ticket by looking for a number or whatever in the system or like a name or something could be normally there's a booking number and you can work with a booking number, but not necessarily. All customers are mentioning their booking number in the email. Yeah. I mean, they mostly mentioned their names. Hopefully you don't get like too many same named people normally the name and the group, which they're coming. Yeah. I mean, if it's a orchestra is the school's names are you can find it in the email somewhere. I mean, definitely. So, um, and to automate the process would be our second use case. How we, uh, that we reduce the, work the workload of of the co-workers and like the third like. Basically the the side quest would be to make it educational. Yes. That's the side. That's something nice to have and can see. It could be also our part then. But. Mhm. Yeah. So many young people coming here and they use AI but not knowing how to use it or. Yeah. It's like only using it as a replacement of Google is nice, but. Yeah. Mhm. Yeah. I mean, one could definitely learn on bias and stuff like this, just assumptions and. Yeah. Okay. I think we have all the important information for now. Yeah. Then I will show you around that you have a picture maybe of some things. Yeah. Yes. Uh, a bit walking and then, uh, maybe show us how your system works internally.
